

ABOUT US

EnergySolutions is a full-service nuclear fuel cycle company that is committed to environmental protection, energy independence and a safe and growing industry. With our dedication to environmental responsibility, EnergySolutions is addressing the problems of global warming and energy dependence.

Since November 2007, the company has been listed on the New York stock exchange. EnergySolutions operates in 2 Canadian, 28 US and 18 European locations. Innovative solutions for your full inventory

Whether it is closed sources, Tritium, Depleted Uranium, contaminated metals or other wastes, our clients tell us that they value our ability to find a solution to their entire inventory.

We safely transfer radioactive liabilities to facilities approved by the UK regulators. We also have access to many facilities internationally, including EnergySolutions' own facilities for metal melting and Depleted Uranium recycling.

We predominantly operate in the UK, Europe and North America and have the capability to extend further as the need arises. Our client list includes some of the most prestigious defence, industrial, medical and educational organisations.

Radioactive Expertise

Our team includes technical staff with decades of experience of working with radioactive material. Each year we perform more than 250 collections and in our 14 years of operations, have safely removed more than 25,000 sources with an activity of more than 1,000 TBq.

As part of EnergySolutions, we have access to 5,500 specialist engineers, project managers, technical and logistics specialists across the US and Europe.

Recycling Radioactives

Increasingly it is possible to recycle radioactive material and we are firmly committed to do so wherever possible.

Safety and Quality

Our service is distinguished by our professionalism; commitment to safety and regulatory support to clients. We annually receive a prestigious RoSPA award and our Quality Management System is certified to ISO 9001: 2000. We believe in doing the job properly.
