

## SURVEY

Radioactivity has been extensively used for many decades in a wide range of industrial, defence, Health & Education applications.

However, the standards for record keeping in the past were not then as demanding as is now required. This has resulted in many organisations having incomplete information on the closed sources or open waste they hold.

Without detailed data on radioactive material it is not possible to recycle or dispose the items. Many of our clients have no formal radioactive training and so need professional assistance in identifying, characterising and recording their inventory.

Our experience with radioactive materials means that we have trained, professional staff available to assist you properly characterise your inventory. This expertise is complemented by a wide range of instrumentation that is used to assist in identifying the most appropriate and cost-effective recycling or disposal route.

### Safeguard

International's Technicians have more than 250 years experience between them and will be able to carry out your survey quickly, safely and cost-effectively. The recycling or disposal solutions we recommend will satisfy all relevant regulations. We do the job properly.
